

VIREXO INNOVATIONS | INTERNSHIP PROGRAM

INTERNSHIP PERFORMANCE REPORT

Weekly Review & Final Performance Record

Intern Name	Muhammad Mubashir Ali
Intern ID	VTX-20260095
Internship Duration	20 August – 20 September 2026
Review Period	Week 1 Review
Reviewer	Virexo Team

Performance Evaluation

Evaluation Category	Maximum	Score
Task Completion	20	20
Technical Skills	20	15
Project Quality	20	15
Problem Solving & Implementation	15	11
Creativity & Innovation	10	6
Communication & Professionalism	10	5
Timeliness & Discipline	5	5
TOTAL SCORE	100	77 / 100

Performance Grade: B

Overall Assessment: Good

Grading Scale

VIREXO INNOVATIONS | INTERNSHIP PROGRAM

Score	Grade	Performance Level
90–100	A+	Outstanding
80–89	A	Excellent
70–79	B	Good
60–69	C	Satisfactory
50–59	D	Needs Improvement
Below 50	F	Unsatisfactory

Reviewer Feedback

Strengths

The project demonstrates a strong end-to-end machine learning workflow, including use of a real Kaggle dataset, duplicate and missing-value checks, exploratory data analysis, categorical feature encoding, model training, and detailed evaluation using accuracy, precision, recall, F1-score, and a confusion matrix. Using a Pipeline and saving the trained model with joblib are also good practical additions.

Areas for Improvement

There are some implementation issues that need attention. The variable `row3` is used for prediction but is not defined in the provided code, which would cause an error if that cell is executed. Also, although missing values are checked, the code mainly removes missing target values and does not clearly handle missing values in all feature columns. The Decision Tree is trained without visible tuning or comparison with another model, so further validation could improve the reliability of the results.

Reviewer Feedback

This is a solid Week 1 submission with noticeably stronger technical work than a basic classification project. The preprocessing pipeline and multiple evaluation metrics show a good understanding of the ML workflow. However, some code sections need to be cleaned up and tested properly, particularly the undefined `row3` variable and the handling of missing feature values. Fixing these issues and adding model tuning or comparison would make the project more polished and reliable.

Evaluation Note

This report is a performance record for the stated review period. Scores are based on the work submitted and observed during the internship. Final internship performance may reflect multiple review periods.
